PREFACE

This reference paper deals with the expenditure of a cross section of Canadian urban families during 1953. The data presented were obtained from a sample survey conducted in January 1954, which was the first of its kind in Canada since 1948. A program of continuing budget inquiries initiated in 1953 will keep the Consumer Price Index weights, determined from the 1948 survey data, under observation and will provide information on the introduction of new items and the necessity of modifying index numbers. Such small-scale budget studies are flexible and will supply more information on the possibilities of sample budget surveys.

In addition to showing family expenditure patterns according to locality, family size and composition, and levels of expenditure, this report furnishes detailed information on expenditure in five urban centres on almost 400 items of expenditure.

Details of expenditure for 1953 were obtained in the January 1954 survey for all expenditure groups except food. It is not feasible to secure reliable recall estimates of amounts spent on specific foods for a period of one year. However, detailed food expenditure by families of the same size, composition, income and living in the same five centres were reported for 1953 in Reference Paper No. 60, "Urban Family Food Expenditure 1953".

HERBERT MARSHALL

Dominion Statistician.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:

- nil or zero
- trace, or amount too small to be shown
- 2A "two adults"
- 2A/1C "two adults and 1 child"

INTRODUCTION

In January 1954 an inquiry was undertaken into family expenditure in five metropolitan areas in Canada. Annual expenditure schedules were collected from 969 families in Halifax, Montreal, Toronto, Winnipeg and Vancouver. The families selected for interview were restricted to a specified composition of adults (persons 16 years of age or older) and children, and within a specific range of income. Families were eligible if they comprised two adults, three adults, four adults, two adults and one to four children, or three adults and one child. The family income range was from \$1,800 to \$6,500 per year.

Survey families were selected by systematic sampling from a list previously drawn for the Labour Force Survey area sample. Family interviews were conducted by a staff of some 90 enumerators who secured approximately 7 usable expenditure schedules from every 10 families on the sample list eligible for enumeration. Some information on the distribution of response and non-response by city and by family type for the families listed and eligible for interview is shown in Table 1.

1. Read 2A as "two adults"; read 2A/1C as "two adults and one child", etc.

DEFINITIONS

The term **family** is used synonymously with **spending unit** in the 1953 Survey. This concept specifies certain personal relationships in terms of consanguinity or living arrangements and is a useful one for expenditure analysis. The spending unit is a group of persons dependent on a common or pooled income for the major items of expense, and living in the same dwelling. In the great majority of cases the members of a spending unit are related by blood, marriage or adoption; groups of unrelated persons who share both income and expenses are seldom found. Unmarried sons or daughters with regular incomes are not considered separate spending units unless their status in the household is that of a roomer, with their finances entirely separate from those of the parent family. However, lodging families, whose heads are not heads of households, and are often married children living with a parent family, are considered separate spending units.

The survey schedule required a complete record of all money receipts and disbursements. Receipts included employment income, other income, other money receipts and dissavings. Disbursements, on the other hand, comprised consumption expenditures, gifts and contributions outside of the family, personal tax payments, security payments and savings.

Employment income included gross income from wages and salaries; income before tax from self-employment; and receipts from military pay and allowances. **Other income** included receipts from roomers and boarders; net rentals; family allowances; interest and dividends; all pensions; workmen's compensation and unemployment insurance benefits; regular receipts from insurance policies and annuities; and miscellaneous regular income receipts. **Other money receipts** included inheritances; bequests; lump sum settlements from property insurance, accident and health policies; and irregular gifts from outside of the family. **Dissavings** referred to net decreases in assets, such as bank accounts, money on hand, investments in business, stocks and bonds, loans made to others, and the sale of real estate and personal possessions, along with net increases in debt, such as mortgages, notes due to banks, insurance companies and individuals, loan companies, instalment purchases, charge accounts and other bills, rents and taxes.

Consumption expenditures included outlays incurred for food; housing, fuel, light and water; household operation; clothing; automobile; other transportation; medical care; personal care; recreation; reading; education; smoking and alcoholic

drinks; and a miscellaneous group. **Gifts and contributions** refer to outlays for persons or organizations outside of the family. **Personal tax payments** refer to income, personal property, poll taxes, duties and succession duties. Sales, excise, automobile and real estate taxes are included as part of consumption expenditure for the commodity or service to which these taxes apply. **Security payments** referred to outlays for insurance premiums, retirement or pension funds, and to mutual benefit society payments. **Savings** referred either to net increases in assets, such as bank accounts, money on hand, investment in business and real estate, bonds and stocks, improvements on real estate, and loans made to others; or to net decreases in debt, such as decreases in amounts owed on mortgages, notes due to banks, insurance companies, individuals, loan companies, balances owing on instalment purchases, charge accounts and other bills due, and rents and taxes due.

A few items noted here in the category of "expenditure" may be considered by some readers as "savings". Thus assets in the "savings" account include houses but not motor cars; assets include bank savings, bonds and stocks but not life insurance premiums; and assets exclude pension payments made by families. However certain payments by families have been broken down and allocated only in part to "expenditure". One instance is a combined payment allocated partly to the family budget and partly to a business budget. Examples of this are housing and fuel outlays where the quarters are used for both business and family use, or expenditures for automobiles where only a certain proportion of use is for family purposes. Another combined payment is the payment on a home mortgage. In this case taxes and insurance, if included, and mortgage interest is allocated to "expenditure", while repayment on the principal of the mortgage is allocated to "savings".

FAMILY ATTRIBUTES

Family attribute data are influenced of course by survey limitations regarding income, family size and composition. Thus family size averages relate only to families ranging from two to six persons. Likewise, income averages represent only those families with incomes ranging from \$1,800 to \$6,500 a year. Nevertheless a majority of urban families are included in the family income and composition ranges surveyed, and the attribute data throws considerable light on the variation of expenditure. Considerable detail on family attributes will be found in Appendix A.

Some 34 per cent of all families in the survey comprised two-person families, 30 per cent were three-person families, 24 per cent were four-person families, 8 per cent were five-person families, and 3 per cent were six-person families. About 12 per

cent reported annual income of less than \$2,500 and about 20 per cent reported over \$5,000. About 3 per cent of family heads were under 25 years of age and about 10 per cent were over 65. Some 8 per cent of family heads had attended university for some period. Almost 60 per cent of the families were living in houses, and the sample had equal proportions of tenants and owners.

Differences among families in the various classifications should be noted. Thus average numbers of persons per family varied between 2.94 and 3.32 for Toronto and Halifax respectively. The number of adults (and earners) per family was larger for the higher expenditure and income groups. In fact three or four adult families tended to be concentrated in the upper income groups.

FAMILY EXPENDITURE PATTERNS

(a) All Survey Families —

The average annual expenditure reported by all the five city sample families for the period of the inquiry is shown in Table II.

**TABLE II. Average Expenditure,
by All Survey Families**

| Item | Per family | Per person | Percentage distribution |
|---|--------------|--------------|-------------------------|
| | \$ | \$ | |
| Food | 1,181 | 380 | 27.3 |
| Housing, fuel, light, water | 680 | 219 | 15.6 |
| Household operation | 159 | 51 | 3.6 |
| Furnishings and equipment | 272 | 87 | 6.2 |
| Clothing | 413 | 133 | 9.5 |
| Other current consumption of commodities and services | 1,116 | 359 | 25.5 |
| Gifts and contributions, personal taxes and security | 539 | 173 | 12.3 |
| Total | 4,360 | 1,402 | 100.0 |

Of the total expenditure of \$1,181 on food, purchases for food prepared at home accounted for \$1,079. Expenditure for fuel, light and water took \$184 of the total of \$680 shown for housing, fuel, light and water. Families reporting payments for rent, taxes and first mortgages on occupied homes had average outlays of \$567, \$142 and \$167, respectively. Averaged over all families in the sample, i.e. those not reporting in addition to those reporting these payments, the consolidated total of these three items amounted to \$395. Household operation outlays of \$159 were made for such things as telephone service, postage, moving expenses and cleaning supplies. Expenses for furnishings and equipment, covering outlays on furniture, floor coverings, electrical and kitchen equipment, household textiles, glassware, china ware, silverware, etc. accounted for \$272. Expenditure for girls' and women's clothing, at \$223, exceeded by an appreciable amount the outlay for boys' and men's clothing of \$159. It is interesting that this greater allocation of expenditure for female clothing, also

observed in the 1947-48 family expenditure survey, was in contrast to a higher allocation to male clothing reported in the 1937-38 pre-war family expenditure survey. Outlays for transportation, including automobile, accounted for \$435 of the total of \$1,116 shown for the group of expenditures distinguished as other current consumption of commodities and services. This group of expenditures included outlays for medical and personal care; for recreation, reading and education; for smoking and alcoholic drinks; and for certain miscellaneous expenses.

The average family in the survey allocated \$539 amounting to about 12 per cent of total expenditure to outlays not classified here as current consumption. Personal taxes took the largest share

of this outlay, at \$252; gifts and contributions outside of the family accounted for \$102; while payments on insurance and pensions amounted to \$185. Attention has been drawn already to the savings element in outlays by families for insurance and pensions.

When family expenditure is converted to expenditure per person, the average family spent some \$1,400 per family member.

(b) City Differences —

The pattern of expenditure of the average family in each of the five cities is shown in Table III.

TABLE III. Average Expenditure, by Cities

| Item | Halifax | Montreal | Toronto | Winnipeg | Vancouver |
|--|--------------|--------------|--------------|--------------|--------------|
| Dollars per family | | | | | |
| Food | 1,104 | 1,277 | 1,153 | 1,107 | 1,129 |
| Housing, fuel, light, water | 633 | 709 | 705 | 594 | 652 |
| Household operation | 169 | 158 | 170 | 143 | 145 |
| Furnishings and equipment | 246 | 246 | 272 | 277 | 327 |
| Clothing | 321 | 431 | 427 | 407 | 398 |
| Other current consumption of commodities and services .. | 874 | 1,029 | 1,237 | 1,129 | 1,175 |
| Gifts and contributions, personal taxes, security | 482 | 517 | 591 | 561 | 509 |
| Total | 3,829 | 4,367 | 4,555 | 4,218 | 4,335 |
| Dollars per person | | | | | |
| Food | 333 | 387 | 392 | 364 | 379 |
| Housing, fuel, light, water | 191 | 215 | 240 | 195 | 219 |
| Household operation | 51 | 48 | 58 | 47 | 49 |
| Furnishings and equipment | 74 | 75 | 93 | 91 | 110 |
| Clothing | 97 | 131 | 145 | 134 | 134 |
| Other current consumption of commodities and services | 263 | 312 | 421 | 371 | 394 |
| Gifts and contributions, personal taxes, security | 145 | 157 | 201 | 185 | 171 |
| Total | 1,153 | 1,323 | 1,549 | 1,388 | 1,455 |
| Percentage distribution | | | | | |
| Food | 28.9 | 29.4 | 25.3 | 26.5 | 26.1 |
| Housing, fuel, light, water | 16.5 | 16.2 | 15.5 | 14.1 | 15.0 |
| Household operation | 4.4 | 3.6 | 3.7 | 3.4 | 3.3 |
| Furnishings and equipment | 6.4 | 5.6 | 6.0 | 6.6 | 7.5 |
| Clothing | 8.4 | 9.9 | 9.4 | 9.6 | 9.2 |
| Other current consumption of commodities and services | 22.9 | 23.5 | 27.1 | 26.6 | 27.2 |
| Gifts and contributions, personal taxes, security | 12.5 | 11.8 | 13.0 | 13.2 | 11.7 |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

City differences in family expenditure averages reflect a number of variables including family size, income level, purchasing habits and preferences, and price levels. Although the influence of these factors is not segregated here, some generalizations can be reached from a study of Table III. For example, Toronto averages of total expenditure on both a family and per-person basis are above those of the other four cities and expenditure on "other current consumption of commodities and services",

accounts for much of the difference. Toronto families allocated more of total expenditure for these purposes and relatively less to food than did families in the other four cities.

(c) Variation With Type of Family—

The pattern of expenditure for the average family in each of eight family types is shown in Table IV.

TABLE IV. Average Expenditure by Family Type¹

| Item | 2A | 3A | 4A | 2A/1C | 2A/2C | 2A/3C | 2A/4C | 3A/1C |

| Other current consumption of commodities and services | 24.7 | 28.2 | 28.9 | 26.6 | 24.4 | 24.0 | 23.7 | 25.5 |
| Gifts and contributions, personal taxes, security | 13.8 | 13.3 | 10.2 | 12.0 | 12.3 | 9.9 | 9.4 | 9.8 |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

1. For 2A read two adults, for 2A/1C read two adults and one child, etc.

Expenditure per family increased on food, clothing and "other consumption of goods and services" for all-adult families with increasing family size, but expenditure per family member decreased as the family size increased. As might be expected, family expenditure did not increase uniformly with increasing family size for such shelter expenses as housing, fuel, light and water; household operation; and furnishings and equipment.

Expenditure per family and per person for families with progressively larger numbers of children show the same relationships as those outlined for all-adult families.

(d) Variation With Expenditure Group—

The pattern of expenditure for the average family at progressive expenditure is shown in Table V.

TABLE V. Average Expenditure, by Expenditure Group

| Item | Under \$2,500 | \$2,500- \$2,999 | \$3,000- \$3,499 | \$3,500- \$3,999 | \$4,000- \$4,499 | \$4,500- \$4,999 | \$5,000- \$5,499 | \$5,500- \$5,999 | \$6,000 and over |

| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

It is to be expected that a classification of families by expenditure groups would show expenditure per family and per family member increasing with successive expenditure ranges. Attribute data shows that two-adult families were concentrated in the lower expenditure groups, while three-adult and four-adult families were found with greater frequency in the higher expenditure groups. Again,

families with heads 65 years of age or over were found in the lower expenditure groups with greater frequency. The proportion of expenditure to food and to shelter expenses such as housing, fuel, light and water; household operation; and furnishings and equipment; decreased as family expenditure increased.

APPENDIX B CLASSIFICATION BY EXPENDITURE AND BY INCOME

Families were classified into nine income groups based on the regular income per family as reported. This regular income comprised employment income, whether from wages or salaries, self-employment, or military pay; plus other income, such as receipts from roomers and boarders, net rents from properties not occupied by the family, interest and dividends, unemployment insurance benefits, workmen's compensation, family allowances, pensions, regular receipts from insurance policies, and miscellaneous items of regular income. In the nine income groups, the average family total income (as above plus other money receipts from irregular sources such as inheritances and settlement of property insurance) and average family expenditure reported were as follows:

| Income group | (1) Average family income | (2) Average family expendi- ture | (3) Ratio of (2) to (1) |
|------------------------|------------------------------------|--|-------------------------------|
| | \$ | \$ | \$ |
| \$1,800-\$2,499..... | 2,291 | 2,956 | 1.29 |
| \$2,500-\$2,999..... | 2,814 | 3,500 | 1.24 |
| \$3,000-\$3,499..... | 3,263 | 3,718 | 1.14 |
| \$3,500-\$3,999..... | 3,746 | 4,283 | 1.14 |
| \$4,000-\$4,499..... | 4,329 | 4,696 | 1.09 |
| \$4,500-\$4,999..... | 4,723 | 5,006 | 1.06 |
| \$5,000-\$5,499..... | 5,266 | 5,348 | 1.02 |
| \$5,500-\$5,999..... | 5,716 | 5,895 | 1.04 |
| \$6,000-\$6,500..... | 6,260 | 6,293 | 1.01 |
| All income groups..... | 3,933 | 4,360 | 1.11 |

The income-expenditure differences should not be construed to be measures of dissaving. A conclusion that these urban families as a whole were overspending their income for living expenses in 1953 by as much as 11 per cent is unwarranted. It is more likely that there has been some under-reporting of income and somewhat less under-reporting of expenditure. Personal savings as shown by the National Accounts amounted to \$1600 millions in 1953.

However, there are extensive differences in content, coverage and methods between the expenditure survey and other sources of data on personal savings such as the National Accounts. The survey was limited to five cities and excludes single persons, large families (with more income earners per family), newly formed families, and persons in military establishments or private institutions. So also is income or savings affected by pension or trust funds not handled by the families themselves. Moreover pension payments and insurance premiums

due by families have been allocated to "expenditure" rather than to "saving". These "security" expenditures amounted to \$185 for the average family.

On the other hand, there is no available precise information as to the contribution of various groups in the personal sector of the National Accounts to total savings. This sector includes private non-commercial institutions such as many hospitals, universities and charitable institutions, together with life insurance companies, who are treated as associations of individual policy-holders, in addition to unincorporated business and family and single-person households.

Some expenditure surveys have endeavoured to collect a complete record of expenditure, income and savings from each family, and then to exclude those records where the family was not able to account for most of the income-expenditure differences by reported changes in savings. The difficulty here is that there may be attempts to reconcile the data submitted by individual families to reach the identity between income and expenditure plus saving. In this survey enumerators were not required to check income-expenditure differences with reported savings but they were carefully instructed to secure complete records of expenditure and income. An examination of expenditures of families who did submit estimates of savings consistent with income-expenditure differences did not indicate any bias in expenditures reported by the other families.

Experience elsewhere has shown that sample surveys of income under-estimate total income by 10 per cent. One reason may be that the housewife, who is usually the respondent, may be more familiar with "take-home" pay than with gross pay. Another may be that self-employed persons may report withdrawals for family expenses as income but omit altogether or partially other net income such as retained earnings. There is evidence too that under-statement of income from such sources as interest and dividends is greater than for other types of income and is more serious for higher income groups. The effect of this under-reporting bias is that families tend to be classified in a lower income bracket.

Another bias is the "refusal" bias, which stems from a higher refusal rate among higher-income families. These families are more reluctant to disclose their finances and moreover they have more complex financial affairs and more than average difficulty in reporting—particularly the independent business and professional persons among them. As far as the expenditure data is concerned, such under-reporting of these families presents no very serious difficulty, but it is more important in its effect on the reports of income and still more important in its effects on reports of savings. It is well established that a very large part of all personal savings in the household stratum of the personal sector is made by families in the upper income brackets.

Reference has been made to experience elsewhere that surveys may understate income by a considerable amount. For example, the report of the Irish Household Budget Inquiry 1951-52 states:

The average regular income per household... was found to be considerably below the average household expenditure. For all town households in the country the average stated regular weekly income was 175.5 shillings whereas the average stated expenditure was 216.9 shillings. The phenomenon of the stated expenditure's exceeding the stated income is, on international experience, a common feature of household budget inquiries. At one time it was believed that there was a general tendency to overstate expenditure, but with the compilation of estimates of National Income derived from independent sources it has usually been found that the average household expenditure was more nearly in accord with National Income statistics than was the stated income. This is precisely the conclusion to be derived from the present inquiry... The understatement of income was, perhaps, mainly due to the following factors:— (a) Despite every assurance to the contrary many people may have feared that the particulars furnished by them would be disclosed to the Revenue Commissioners for Income Tax purposes—this would be particularly the case with persons who earned money in their spare time, and it is probable that this spare-time income was largely excluded. (b) The fear that particulars furnished by earners would be seen by other members of the same household, although every precaution was taken to ensure confidentiality. (c) Income, such as dividends or bonuses, which, although regular, is received at infrequent intervals was probably overlooked in many cases unless received during the week of the inquiry. Due to the method by which the inquiry was conducted the interviewer frequently had no contact with members of the household other than the housewife who had, therefore, to tell the earners at second hand the instructions she had received regarding the information on income, etc.

The report on the United States' expenditure survey of 1950 may also be cited. It is stated in Bulletin 1097 by the Bureau of Labor Statistics:

The data in expenditure surveys at all times and in many countries have shown a lack of balance, with average disbursements nearly always exceeding average receipts. The lack of balance was interpreted as a tendency to exaggerate expenditures. However, the development of national income totals from other sources revealed the extent to which income data obtained from surveys may be under-

estimates... The comparison of survey totals with estimates from other sources have shown that the survey total usually underestimates income, savings, and "luxury" expenditures... Discrepancies of this kind have been noted with almost an historical regularity (There is a reference to this type of discrepancy in England as early as 1790). Experience suggests that average family income is usually understated. On the other hand, the over-all expenditure data are more accurate than the income and savings data. It appears that sample surveys of families and individuals income are likely to under-estimate income by at least 10 per cent. The comparisons made with the Department of Commerce data in 1941 showed that total money income was under-estimated by 11 per cent, and wage and salary income by 10 per cent... It is still not possible to determine with precision what part of this error is due to the loss of high-income families from the survey samples. An examination of a considerable number of studies indicates there must be a significant amount of under-reporting of income from families included in such surveys.

Despite the fact that very high income families were excluded from the 1953 expenditure survey, inspection of the income-expenditure differences and the above considerations raised the question whether publication of expenditure by income groups was warranted. It was not possible to adjust the income reported without measurement of the bias in reporting. Nevertheless, the income of a current year is widely used as a measure of economic level and as an important variable in its own right. To quote Bulletin 1097 again:

The question is whether income as reported provides a measure of income which is appropriate for studying family expenditure. To the extent that the income forgotten in the interview is a type which does not influence the level of consumption expenditure, the reported income may be better than the accounting total... If the surveys made in two different situations are subject to the same degree and kind of under-reporting, then the comparison may not be affected by the fact that the income of the particular year was not fully reported.

For these reasons this report shows expenditure classified both by expenditure groups and by income groups. The latter data follow immediately as part of this appendix. A considerable amount of information on the characteristics of families has already been shown for families in successive expenditure ranges in Appendix A.

| No. | Item | All income groups | Income group | | | | | | | | |
